These proteins, their fragments, variants and fusion proteins, are used to elicit or enhance an immune response against Streptococcus, and to elicit a similar response to a target antigen fused to the protein. Unlike other immunological carriers, Hap60 proteins are not immunosuppressive so immunological carriers, Hap60 proteins are not immunosuppressive so provide an increased response to any conjugated or fused antigen. Also, where used for cancer control, they lack the side effects associated with endotoxins. They can also be used to detect specific antibodies and in treatment or prevention of tumours (e.g. sarcoma or cancers of breast, ovary, prostate, lung, pancreas or liver). The Hap60 polynucleotide is used for recombinant production of the protein, as a source of primers and probes for detecting streptococci in standard hybridization/amplification assays, and therapeutically in gene

AAV23905-30 represent heat shock proteins (Hsps). The specification describes Streptococcal Hsps, designated Hsps0. These proteins, their fragments, variants and fusion proteins, are used to elicit or enhance an immune response against Streptococcus, and to elicit a similar response to a target antigen fused to the protein. Unlike other immunological carriers, Hsp60 proteins are not immunosuppressive so provide an increased response to any conjugated or fused antigen. Also, where used for cancer control, they lack the side effects associated with endotoxins. They can also be used to detect specific antibodies and in treatment or prevention of tunours (e.g. sarcoma or cancers of breast, ovary, prostate, lung, pancreas or liver). The Hsp60 protein, as pource of primers and probes for detecting streptococci in standard hybridization/amplification assays, and therapeutically in gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               909
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   999

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 21 AsnValLeuAlaAspAlaValLysAlaThrLeuGlyProLysGlyArgAsnValValLeu 40
                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes antigenic Pseudomonas aeruginosa proteins (P1). The P. aeruginosa proteins have antibacterial activity and can be used in vaccines and as antagonists. The proteins or their fragments, or antibodies are useful in the detection and/or diagnosis of P. aeruginosa. They are also useful for producing a vaccine and inducing an immune response against P. aeruginosa infection. An agent capable of antagonising, inhibiting or otherwise interfering with the function or expression of Pl are useful in the manufacture of a madicament for the treatment or prophylaxis of P. aeruginosa infections. The present sequence represents a specifically claimed P. aeruginosa großi protein sequence from the present invention.
                                                                                                                                                                                                                                                                                                                                            Antigenic Pseudomonas aeruginosa proteins, useful in the detection and/or diagnosis of P. aeruginosa infections and for producing vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GATAAACTTGCAAATGCTGTTAAAGTAACACTTGGACCTAAAAGGCCGTAATGTCGTTATT

Claim 3; Fig 26; 129pp; English.

The present invention describes antigenic Pseudomonas aeruginosa proteins (P1). The P. aeruginosa proteins have antibacterial activity and can be used in vaccines and as antagonists. The proteins or their fragments, or antibodies are useful in the detection and/or diagnosis of P. aeruginosa. They are also useful for producing a vaccine and inducing an immune response against P. aeruginosa infection. An agent capable of antagonising, inhibiting or otherwise interfering with the function or expression of P1 are useful in the manufacture of a medicament for the treament or prophylaxis of P. aeruginosa infections. The present sequence represents a specifically claimed pTrcHisB expression vector großL fusion protein sequence from the present invention

```
AAY23905-30 represent heat shock proteins (Hsps). The specification describes Streptococcal Hsps, designated Hsp60. These proteins, their fragments, variants and fusion proteins, are used to elicit or enhance an immune response against Streptococcus, and to elicit a similar response to a target antigen fused to the protein. Unlike other immunological carriers, Hsp60 proteins are not immunosuppressive so provide an increased response to any conjugated or fused antigen. Also, where used for cancer control, they lack the side effects associated with endotoxins. They can also be used to detect specific antibodies and in treatment or prevention of tumours (e.g. sarcoma or cancers of breast, ovary, prostate, lung, pancreas or liver). The Hsp60 polymucleodide is used for recombinant production of the protein, as a source of primers and probes for detecting streptococci in standard hybridization/amplification assays, and therapeutically in gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid encoding heat shock protein-60 from Streptococcus, useful in vaccines, as carriers for other immunogens, as anticancer agents and for diagnosis
                                                                                                                                                       Hsp; immune response; immunological carrier;

represent novel Neisseria meninglis and N. gonorrheae polynucleotides and polypeptides. AAZ54537 to AAZ54576 and AAZ54616 to AAZ55473 represent PCR primers used in the exemplification of the present invention. The polypeptides, the polynucleotides, antibodies and compositions of the invention can be used as vaccines, as diagnostic reagents, and as immunogenic compositions. The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisseria bacteria, or to raise antibodies. They may also be used to screen for agonists or antagonists, which may themselves may also be used in gene therapy protocols.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .21 GAAAAGTCTTTTGGTTCCCCAGTTATTACAAAAGATGGTGTATCTGTTGCAAAAGAAATT 180

                                                                The present invention relates to proteins from Neisseria gonorrhoeae. Also disclosed are the nucleic acid molecules encoding the proteins an antibodies that specifically bind to the proteins. The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for treating or preventing N. gonorrhoeae infection, this may be in the form of a vaccine or gene therapy. Sequences given in records ABP910746 ABP81046 represent nucleic acid molecules of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GAAAAGTCTTTTGGTTCCCCAGTTATTACAAAAGATGGTGTATCTGTTGCAAAAGAAATT

The polypeptide and polynucleotides of the invention are useful for preparing a medicament and for preventing or treating infection caused by F. tularensis in an animal. The polynucleotide of the invention is administered to an animal in a form in which it is expressed in situ. The present sequence is Francisella tularensis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    or

Novel Neisserial polypeptides predicted to be useful antigens for vaccines and diagnostics

Claim 2; Page 1385; 1453pp; English.

AAZ53015 to AAZ54536, AAZ54577 to AAZ54615, and AAY74253 to AAY75941 represent novel Neisseria meningitis and N. gonorrheae polynucleotides and polypeptides. AAZ54537 to AAZ54576 and AAZ54616 to AAZ55473 represent PCR primers used in the exemplification of the present invention. The polypeptides and compositions of the invention can be used as vaccines, as diagnostic reagents, and as immunogenic compositions. The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisseria bacteria, or to raisse antibodies. They may also be used to screen for agonists or antagonists, which may themselves may also be use as antibacterial agents. The polynucleotides of the invention may also be used in gene therapy protocols.

                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a protein that acts as a detrimental organism controller and is isolated from Enterobacter aerogenes. The invention encompasses a detrimental organism-resistant plant producing the protein of the invention in an effective amount for controlling detrimental organisms. A composition of the invention is useful for the preparation of a detrimental organism controller. The current sequence represents a detrimental organism controller protein of the invention.

The protein is antigenic, and is visible on a Western blot of C. jejuni protein after incubation of the blot with antibodies against a flagellaless mutant of C. jejuni but not visible after incubation with antibodies against wild type C. jejuni. The proteins are used to produce vaccines which are useful for protecting animals, especially poultry, against Campylobacter, especially C. jejuni.

This sequence represents the E. coli chaperone protein GroEL which can be used for treating diseases associated with protein/polypeptide structure, e.g. Alzheimer's disease. The sequence can also be used for reconditioning molecules, especially a protein that has previously been inactivated or denatured, or more generally for altering the structure of a molecule by unfolding or refolding. The sequence also has applications for purification procedures and can increase yield, specific activity or quality of biological molecules, especially by co-expression with the intranasally, or from a slow-release formulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240

The invention provides a method of providing chaperone activity in vivo, by administering to a cell a fragment of a molecular chaperone which has in vivo activity. Also provided is a method of determining whether a fragment of a molecular chaperone is active in vivo by: (i) providing a cell with a deficient molecular chaperone activity; (ii) administering complements the fragment complements the deficient endogenous molecular chaperone. The method can determine which fragments of the molecular chaperone can be used to complement a mutent or deficient molecular chaperone can be used to allows an in vivo assessment of chaperone activity as compared to previous tests which only measured activity in vitro.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GATAAACTIGCAAAIGCIGITAAAGIAACACTIGGACCIAAAGGCCGTAAIGICGTIAIT 120
